

TECH FOR PEOPLE

YOUR LIVING LAB NETWORK

Where do we come from?

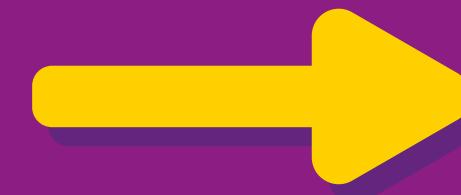

ITGALL was born as a tangible result of the IN4AHA Horizon project. Living Labs were used to test the implementation of technological/digital solutions in the context of active and healthy ageing

ITGALL positioned itself as a catalyst Living Labs network for the validation and development of person-centred products and services

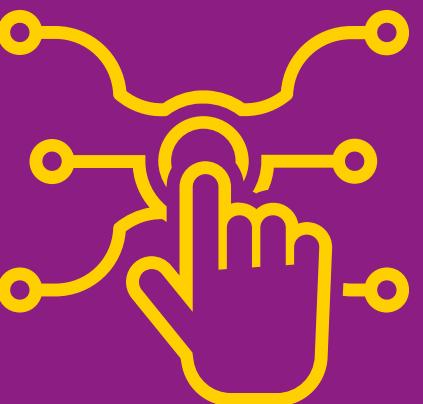

A CLEAR
OBJECTIVE
FROM THE
OUTSET

Strengthen the capacity of companies in the health and social care ecosystem and transfer knowledge through the creation of new technology validation services

What is ITGALL?

ITGALL is the private Galician network of social and healthcare Living Labs managed by the CSG, which combines diverse capabilities and a large community of users to test technology-based or digital solutions based on a person-centred approach

The CSG develops a model based on clinical excellence, **I+D+I, digital transformation and the development of technology-based products** aimed at the **wellbeing of people**

Our ITGALL Network is a space that stimulates **co-creation, design and collaboration** between all parts of the care ecosystem: older people, their families, health professionals, informal carers and service providers

Living Labs are open innovation environments or platforms where **technological solutions are tested and developed** in real-life situations. These environments allow for collaboration between companies, institutions, end users and other interested **agents to develop, validate and test new technologies, products or services**

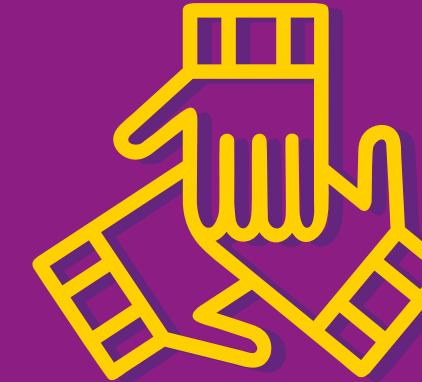

ITGALL VALUE CHAIN

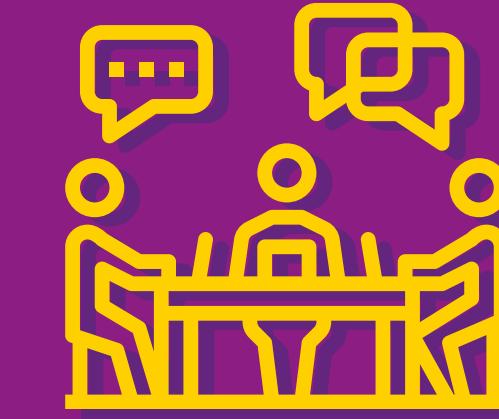

People-centered innovation

Living Lab

Co-Creation

Tailored to customer needs

Evaluation and impact

ITGALL Network - Living Labs

AFAGA Alzheimer offers advanced care to people with dementia and their families, collaborating in innovative solutions and advocating for their needs before the Administration.

ATEGAL is a training centre for senior citizens with more than 40 years of experience in Galicia. More than 10 years testing products and services for seniors, we are a link between companies and seniors.

Atendo provides specialised care for older people to remain in their homes. Its innovative approach prioritises autonomy and collective participation to solve challenges in different models of care.

ITGALL Network - Living Labs

Cruz Vermella works with a focus on social and health care and the application of technology to prevent risks and loneliness in groups such as the elderly or families at risk, being part of the largest humanitarian organisation in the world.

Cruz Vermella

DomusVi is the leading network of care for the elderly and mental health in Spain, with 168 residential and day care centres, as well as home services, providing comprehensive care throughout life.

Cuidamos personas en buena compañía

Gran3dad accompanies and helps to fill the lives of people living in the geriatric, dependency and health care system with meaning and usefulness. Its own methodology is designed to generate alternative and improved lifestyles.

Gran3dad
VIVE GRANDE!

ITGALL Network - Living Labs

SARAIVA

Fegerec was created with the aim of optimising and making resources and efforts profitable in order to improve the common needs in the social and healthcare field of a very heterogeneous group, people suffering from a rare disease in Galicia.

O Lecer Fogar para os maiores is a Residential Home in Vigo, created in 2004 with 8 places and expanded to 20 in 2015, focused on offering personalised and close attention to the elderly, inspired by the Nordic model "living away from home, but at home".

SARAIVA offers comprehensive services to older people, based on the PCC model, housing and meaningful activities. They stand out for their innovative approach, participating in research projects with universities and in European initiatives on health and ageing.

Collaborators

The ITGALL network has several collaborators whose **function is to provide support in some part of the process** such as: consultancy, data processing, business intelligence (market analysis), etc. Here are some of the collaborators who have worked with us.

 LINKNOVATE

DINAMIZA

 CEBIOVET
CENTRO DE BIOMEDICINA & VETERINARIA

 LAOSAUDE
REDE DE LIVING LABS DE SAÚDE DE GALICIA

Projects

ITGALL actively collaborates in projects that positively impact the healthcare ecosystem. From educational programmes that encourage the adoption of technologies to environmental actions that promote sustainability, **this network goes beyond the conventional boundaries of research and technological development, demonstrating its commitment to a holistic and positive impact on the region**

This holistic approach not only strengthens ITGALL's position as a benchmark in innovation

It also consolidates its role as an agent of change in improving the quality of life in Galicia and beyond

Projects in which we participate

CELIA

Where are we going?

Towards a future where...

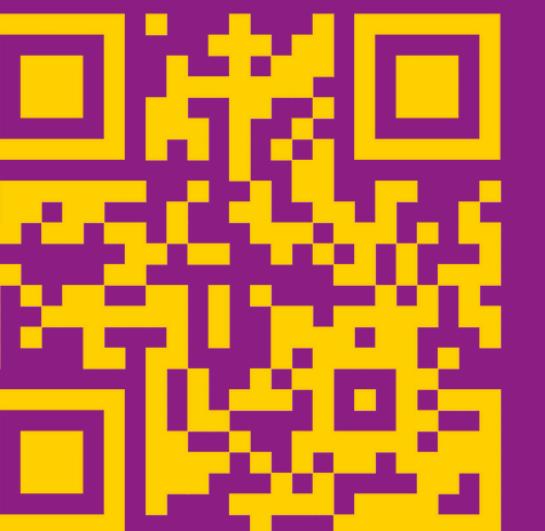

**WE'LL BE VALIDATORS OF
TECHNOLOGIES AND THE
REFERENCE NETWORK OF
ENTITIES, LAUNCHERS,
INVESTORS AND
ORGANISATIONS THAT
DEVELOP PROJECTS FOR THE
WELL-BEING OF PEOPLE**

Join the ITGALL network

- As a Living Lab
- As a tester of technological solutions
- As a collaborator
